Engineering Collaboration Demo: NEXORA & ClearStream on ITN Hub

To help demonstrate project workflows and enable users to explore how teams collaborate using the platform, we have created a series of fictitious organizations. These examples walk through how companies coordinate on technical tasks, manage project communication, and ensure traceability across roles and templates. ITN will provide you with access to this demonstration site, allowing you to navigate the system firsthand and experience its full capabilities in a real-world simulation.

NEXORA (Next-Generation Engineering Operations & Review Assistant) is a forward-thinking engineering services company specializing in digital transformation of project workflows. Through ITN Hub, NEXORA manages internal teams, client communications, and structured engineering data with clarity, control, and traceability.

Organization Snapshot

- Company Name: NEXORA Engineering Demo
- Industry: EPC (Engineering, Procurement, Construction)
- Location: Houston, Texas, USA
- Website: www.nexora-demo.com
- Primary Focus: Proposal management, technical clarifications, and project design coordination

User Base & Roles

Role Name	Scope	Description	User
NEXORA_Organization Admin	Organization	Full control over the organization—users, roles, and platform settings.	Elena Morrison
NEXORA_Project Manager	Project	Oversees all project activities, assigns team, and drives progress.	Jake Turner
NEXORA_Senior Engineer	Project	Handles core engineering tasks—designs, technical reviews, and documentation.	Priya Desai
NEXORA_CAD Designer	App/Module	Responsible for drafting, modeling, and updating engineering drawings.	Michael Zhang
NEXORA_Structural Analyst	Project/App	Validates the structural integrity of designs and provides recommendations.	Ana Rodríguez

Role Name	Scope	Description	User
NEXORA_QA Engineer	Project	Ensures quality standards, tests deliverables, and logs inspection data.	Victor Thompson

ClearStream Energy Solutions is a key client of NEXORA, focused on solar, wind, and industrial energy operations throughout North America. NEXORA supports ClearStream in delivering infrastructure projects efficiently and with precision.

ClearStream Energy Users:

- Adam Wallace – Project Sponsor
- Jenny Lin – Technical Reviewer
- Omar Bashir – Document Control Lead

Collaborative Project: West River Solar Expansion

- Objective: Add 80MW solar panel infrastructure with structural and electrical upgrades
- Duration: 12 months
- Key Deliverables: Structural layouts, design calculations, QA documentation, client transmittals

Cross-Team Collaboration

From NEXORA:

- Elena Morrison – Admin oversight
- Jake Turner – Project management
- Priya Desai – Engineering lead
- Ana Rodríguez – Structural review
- Michael Zhang – Drafting and modeling

From ClearStream Energy:

- Adam Wallace – Project Sponsor
- Jenny Lin – Technical Reviewer
- Omar Bashir – Document Control Lead

Project Templates & Communication Structure

NEXORA has developed a suite of templates for project management and communication control. These are tailored to support real-time issue tracking, design coordination, and documentation exchange:

1. Proposal Clarification Template

- Use: Managing technical and commercial clarifications during bid stage.
- Purpose: Maintain structured responses, client queries, and internal reviews.

2. Design Review Tracker

- Use: Tracking design comments, approvals, and iterations.
- Purpose: Assign issues to engineers, mark status, log changes.

3. Document Control Register

- Use: Monitoring deliverables, transmittal status, and approvals.
- Purpose: Keep clients and stakeholders informed in real-time.

Smart Filters & Rules Engine

- Users can create and save **custom filters** on any template to isolate specific issues, team members, or categories.
- Each template supports **rule execution** to highlight or flag rows based on scripted logic (e.g., overdue tasks, missing responses).

 NEXORA AI Assistant The built-in AI Assistant allows project members to interact with data conversationally—asking questions like:

- "Which issues are overdue and assigned to Priya?"
- "Summarize all clarifications pending client response."

This transforms structured data into meaningful conversations, accelerating decision-making and simplifying oversight.

How NEXORA Uses ITN Hub

- **Centralized Role-Based Access:** Each user has access only to relevant projects and applications.
- **Real-Time Collaboration:** Engineers like Priya and Carlos use templates to log daily progress and respond to design issues.
- **Project Management Oversight:** Daniel oversees 3 active projects and uses dashboards for review and coordination.
- **Audit & History Tracking:** Every field update is tracked, ensuring transparency for QA reviewers like Ahmed.
- **Efficient Document Management:** Linda uploads revision-controlled files to the File Manager for client sharing.
